

My wife has breast cancer that was at a treatable stage when she had researched for an alternative treatment so she wouldn't have to go through chemotherapy. My wife is well educated and a very smart person. If it wasn't for the side effects of chemotherapy she would have done it without seeking an alternative treatment. My wife found LASE MED's website while researching her type of cancer, so she requested more information about L.I.E.S.H. My wife liked what she had read and what Dr. Carpenter had told her. I will support my wife in whatever her decision is for treatment, so the appointment was made for a consultation at LASE MED. Her tumor was very close to the skin and by the time my wife left for her appointment at LASE MED it started protruding the skin. Two weeks later the L.I.E.S.H. treatment was complete and Dr. Carpenter told my wife she was cancer free. The months that followed showed a reduction in the tumor's size from what we can see with our eyes, but the sore grew larger. My wife kept in touch with Wendy Simmons (the office manager at LASE MED) and tried to get Dr. Carpenter to respond to questions on what is going on. My wife became very worried because there were no responses from Dr. Carpenter. My wife told me that Wendy kept telling her the reason that Dr. Carpenter was not responding is because Dr. Carpenter was sick. Nineteen days had passed so I called LASE MED and to my surprise Dr. Carpenter answered the phone. I told her who I was and started to explain what was going on with my wife, but it was apparent that Dr. Carpenter knew what was going on because out of her own mouth she told me, "What is going on is not cancer, your wife is cancer free," Dr. Carpenter got very hostile with me over the phone. My wife's trust in L.I.E.S.H. treatment became less trustworthy so it was time to seek other treatments. It became a battle against time at this point because appointments for consultations were approximately 6 to 8 weeks to get in and another month for testing and another month to begin treatments. The reason for the long wait is because there are a lot of people with cancer. The day my wife went to the appointment for her tests she had a seizure. The cancer had metastasized and went to her liver and then her brain. She woke from the seizure a day later surprising the doctors and for most of that day she gave the family one last time together. She had told me she felt stupid for trusting in Dr. Carpenter and I told her she is far from being stupid. We try to trust in those that attempt to heal us because they are the ones with the educated guess. I don't know if anybody has benefitted from LASE MED besides Dr. Carpenter. If you already have or you're getting treatment from LASE MED do yourself a favor and get another professional opinion for additional support. Don't let time become a battle for you.

There are many conventional treatments now with less side effects and has better results. These conventional treatments should be advertised to help educate the patient on specific treatments for different cancer issues. Dr. Carpenter claims she invented the machine to administer L.I.E.S.H. Treatments. Dr. Carpenter also is the sole operator of this machine when L.I.E.S.H. is being administered. If this was a true cure for killing cancer she would be very rich on just the sales of this miracle machine. Instead Dr. Carpenter is ripping people off from their hard earned money and their quality of life. Dr. Carpenter also has a body guard; she claims that it is to protect her from her ex-husband. I guess she never heard of a restraining order or there maybe another reason for her needing protection. It takes a certain type of person to be deceitful and take advantage of

vulnerable people for profit especially when they know a person is still going to die with out proper care.

The internet lets anybody advertise whether it's true or false. The truth of what my wife's experience at LASE MED is that Dr. Carpenter sounds believable to those who are seeking alternative treatments for cancer. Unfortunately I now know my wife was never cancer free. LASE MED INC has stolen the time that my wife needed for any hope.

Their Little Rock Office seems to be closed. There are malpractice lawsuits against LASE MED INC from the Little Rock Office.
